

# SF20 - RECIRCULATOR SYSTEM

## Optional premix unit

The Master Flo SF20 Recirculator System is a fully integrated dampening circulator system that combines filtration, refrigeration, tough delivery pump and venturi return. The SF20 supplies constant filtered and chilled quality fountain solution over an extended product life cycle. The SF20 comes in a 20 gallon capacity and 1-ton refrigeration, with a variety of optional accessories.

With the return pump option, advanced filter cartridge filtration can be used to increase the life of the fountain solution and plates, which will reduce the frequency of press cleaning. A fountain solution premixing unit is available as an option and makes the SF20 a more automatic system.

## Features:

- Bag filtration
- 1-ton air-cooled mechanical refrigeration
- Venturi return system
- ½ HP feed pump
- Stainless steel tank and covers
- Removable panels for easy maintenance
- Removable tank cover
- Heavy duty steel frame
- Front mounted air intake
- Fountain solution drainage via discharge pipe

## Options:

- 1.5-ton air-cooled mechanical refrigeration
- Remote conductivity system
- Electric return pump system
- Premix unit with stand and mechanical float valve

## Benefits:

- Easy setup
- Maintain continuous filtration
- Maintain proper temperature

## Technical Data

Voltage: 208-240V / 50-60Hz / 1ph  
Dimension: L=27" W=27" H=43"  
L=69cm W=69cm H=109cm  
Weight: Approximately 300Lbs
